Biology in Focus Chapter 9: The Cell Cycle - Biology in Focus Chapter 9: The Cell Cycle by Science Education 22,978 views 4 years ago 58 minutes - This lecture goes through Campbell's **Biology**, in Focus **Chapter**, 9 over the Cell Cycle. I apologize for how many times I had to yell ...

In unicellular organisms, division of one cell reproduces the entire organism

Concept 9.1: Most cell division results in genetically identical daughter cells

Distribution of Chromosomes During Eukaryotic Cell Division

During cell division, the two sister chromatids of each duplicated chromosome separate and move into two nuclei

Interphase (about 90% of the cell cycle) can be divided into subphases

Mitosis is conventionally divided into five phases

Cytokinesis: A Closer Look

Prokaryotes (bacteria and archaea) reproduce by a type of cell division called binary fission

The cell cycle is regulated by a set of regulatory proteins and protein complexes including kinases and proteins called cyclins

An example of an internal signal occurs at the M phase checkpoint

Some external signals are growth factors, proteins released by certain cells that stimulate other cells to divide

Another example of external signals is density-dependent inhibition, in which crowded cells stop

Loss of Cell Cycle Controls in Cancer Cells

A normal cell is converted to a cancerous cell by a process called transformation Cancer cells that are not eliminated by the immune system form tumors, masses of abnormal cells within otherwise normal tissue
